Summary

M.E. Computer Engineering student and B.Tech Artificial Intelligence and Data Science graduate (CGPA: 9.63/10) with hands-on experience building LLM applications, RAG pipelines, AI workflows, and data-driven business solutions. Built projects using Python, LangGraph, LangChain, FastAPI, SQL, Power BI, and ChromaDB, including a RAG system where LLM hallucinations were evaluated and reduced through deterministic controls. Seeking internship or entry-level roles in AI Solutions, GenAI Applications, AI Implementation, or AI Operations.

Education

Thakur College of Engineering and Technology, Mumbai M.E, Computer Engineering	2026 – 2028 (Expected)
Thakur College of Engineering and Technology, Mumbai B.Tech, AI & Data Science	Nov 2022 – May 2026 CGPA: 9.63 / 10.0

Experience

Business Analyst Intern – UptoSkills (Remote) Jan – Jul 2026

- Cleaned and validated business datasets using SQL, ensuring accuracy before analysis and reporting.
- Collaborated on a team project to convert raw data into analysis-ready insights and presented findings and recommendations to stakeholders through PowerPoint.

Data Analysis Intern – UptoSkills (Remote) Nov 2024 – Feb 2025

- Consolidated messy multi-source data in Excel and built interactive Power BI dashboards (KPI cards, slicers, drill-through) as a single source of truth for the team.
- Took on Team Lead duties for the final month – coordinated task allocation, ran daily stand-ups, kept deliverables on schedule.

Projects

AIVOA – AI QMS Copilot – Python, LangGraph, React (<https://github.com/Asmita871/aivoa-qms-copilot>)

- Built a LangGraph-based AI copilot that processes unstructured complaint messages, identifies structural risk levels, and recommends corrective actions.
- Designed the workflow from raw complaint input through risk assessment and suggested resolution, connecting backend decision logic with a React-based user experience.

NYC Restaurant Inspection Pipeline – Python, LangChain, FastAPI (<https://github.com/Asmita871/restaurant-inspection-pipeline>)

- Built a RAG pipeline over 295K+ restaurant-inspection records and identified a 45× data-quality anomaly associated with a COVID-era rule change; corrected a grouping issue that distorted trend analysis.
- Evaluated LLM responses and found fabricated restaurant names in 3 of 4 sampled outputs; redesigned the workflow so deterministic rules handled factual decisions while the LLM generated human-readable summaries.

E-Commerce Revenue Leakage Pipeline – Python, Pandas (<https://github.com/Asmita871/E-commerce-Revenue-Leakage-Pipeline>)

- Consolidated six fragmented e-commerce datasets containing 100K+ records to identify operational factors associated with revenue leakage.
- Identified high-cancellation SKUs associated with product ratings as low as 1.5/5 and produced an operations-ready target list for further action.

Technical Competencies

- **LLM Applications & AI Workflows:** LangGraph, LangChain, Retrieval-Augmented Generation (RAG), ChromaDB, prompt design, LLM evaluation, hallucination analysis, human-in-the-loop workflow design
- **Development & Integration:** Python, FastAPI, REST APIs, Git, Docker, React
- **Data, ML & Analytics:** SQL, Pandas, Power BI, DAX, Excel, scikit-learn, XGBoost, KMeans, data validation, statistical testing
- **Business & Collaboration:** Stakeholder communication, dashboarding, business problem analysis, Agile teamwork, presentation of insights
- **AI-Assisted Development:** ChatGPT, Claude, Gemini

Certifications

PwC Switzerland – Power BI Job Simulation (Forage) | IBM – AI Fundamentals | Udemy – Power BI Mastery
